

a) Shift mode between spatial resolutions

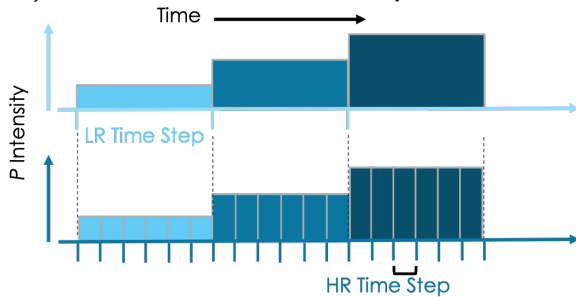

$$b_o = 0$$

- Low intensity precipitation
- Moderate intensity precipitation
- High intensity precipitation

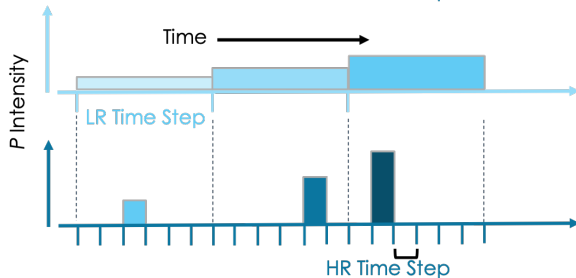

$$b_o \approx \left| \frac{\Delta X_H^2 - \Delta X_L^2}{\Delta X_L^2} \right|$$

b) Shift mode between temporal resolutions

$$b_o = 0$$

- Low intensity precipitation
- Moderate intensity precipitation
- High intensity precipitation

$$b_o \approx \left| \frac{\Delta t_H - \Delta t_L}{\Delta t_L} \right|$$
